

## VMI Service

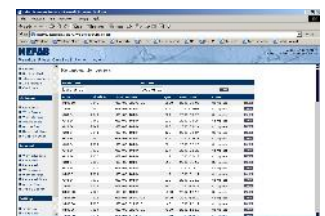

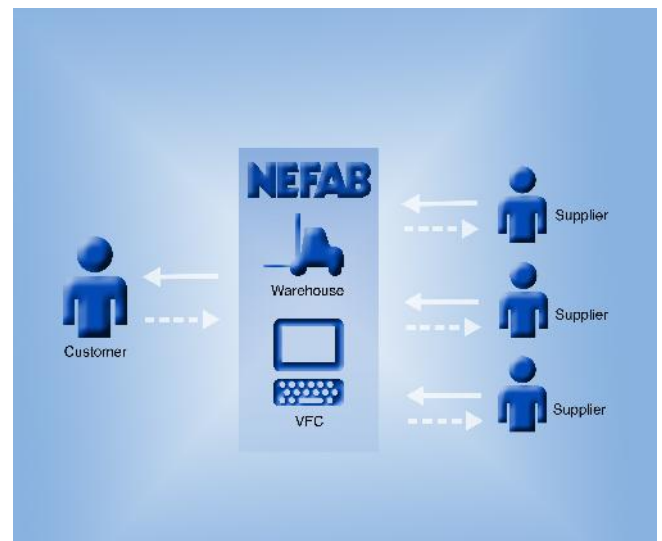

### Vendor Managed Inventory

**Under contract agreements, Nefab operates Logistics Centers that provide "Just-In-Time" deliveries of packaging materials to customer production lines. Based on the customer's projected volume, Nefab assumes responsibility for the entire logistics flow, from subcontractors to the customer's production plant. This frees up capital, storage space and personnel resources by transferring inventory supply responsibility to Nefab under VMI contracts.**

With over 40 years of experience in packaging and a high degree of knowledge in system-support for Logistics and Supply Chain Optimisation, Nefab offers customers a professional, cost-efficient and long-term solution for packaging supply through a VMI set-up. Some of the benefits with Nefab VMI are summarised below:

- Supply Chain Optimisation
- Reduced number of suppliers
- Short delivery times
- Reduced capital tied up in stock
- Cost take-out in administration
- Cost take-out in warehouse labour
- Improved quality control
- Focus on core activities
- Reduced risk for obsolete material

A web-based system developed in-house by Nefab is used to control the flows of information and products, VFC (Vendor Flow Control). Delivery times are shortened and the entire supply chain can be optimised through real-time flows of information between the customer, Nefab and subcontractors.

Nefab's own web-based tool for Supply Chain Visibility called NEFAB Vendor Flow Control (VFC).
