Nefab Packaging Solutions for Ericsson

Packaging for Telecom Equipment

Ericsson is the largest supplier of mobile systems in the world and it needed packaging for a component of their telecom equipment. ESD, humidity, and shocks were the main concerns in this specific application.

The Nefab Solution

Nefab is the preferred global supplier of packaging material to Ericsson. The solution was a joint effort between Ericsson and Nefab engineers. The packaging consists of a corrugated box, ESD-protective cushioning and a barrier for protection from both ESD and humidity. Desiccants inside the packaging provide extra protection from humidity.

Benefits for Ericsson

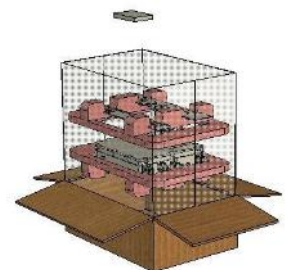

The benefits from this partnership with Nefab are numerous. Nefab provides complete packaging solutions, minimizing the total cost of product protection for the customer. This is done with a system of products and services, from consultancy and packaging design to delivery.

“Expensive and sensitive products combined with a more complex logistic situation makes the choice of packaging solution more important than ever before. There are many issues such as ESD, moisture protection and environmental legislation that can vary depending on the destination.

The packaging solutions which NEFAB provides proves they have the knowledge we require and we are very satisfied with their performance. We've been helped to speed up our packaging design so we can concentrate on our core products.

NEFAB has also helped us with product drawings, packaging instructions and necessary environmental documents.”

Peter Wiik, design engineer
Ericsson AB

Packaging for telecom equipment components.
